## How Computers Work

Greetings Display! Your job is to wait until the CPU tells you to plot an  $(x, y)$  point on the screen. When you are asked to plot a point, find the column that corresponds to the  $x$ -value and the row that corresponds to the  $y$ -value and plot the intersection by filling in the square.

Don't show the image to your group partner(s) until the CPU has finished running the entire program.
